Look at the label on any insulation before you install it. The higher the R-value, the greater the insulating power.

Heat flow can be either the loss of heat from a house during the winter or heat gained from the outdoors during the summer.

Both fiber glass and rock wool are mineral fiber materials. The U.S. Department of Commerce has estimated that mineral fiber accounts for about 70 per cent of all home insulation sold, making it the most popular type. Mineral fiber batts and blankets are rated at R-11, R-13, R-19, R-22, R-30, or R-38.

"R"ou Properly Insulated?

The Federal Trade Commission recently adopted a regulation requiring all manufacturers of home insulation to label their products with R-values, a practice that the producers of mineral fiber insulation have been following for many years.

The FTC's explanation of R-value is this: "R means resistance to heat flow. The higher the R-value, the greater the insulating power."

We've had a number of calls about re-certification of private applicators in order for them to purchase restricted-use pesticides. Your current permit is valid until December 31, 1980.

During the late fall and early winter of 1980 we will provide an opportunity for you to become recertified. At this point, the details have not been fully developed. I anticipate the format will be a two hour lecture/open book exercise for participants to complete.

This is to say that we are aware that notices have been mailed and at the appropriate time you will be informed of the method, time and place for re-certification.

A lot has been written in recent months about the use of solar power. We are constantly getting new uses and understandings of this source.

About mid-December, we will have on display a solar heated firewood dryer. It holds a cord of firewood and will dry in four to six weeks, wood freshly cut. Dry wood is recommended for use in fireplaces and wood burning stoves because there is less creosate build-up in the chimney and flues. This means less chance of a flue or chimney fire.

Cost for building a solar dryer is about $56. The engineers say it will pay for itself in two years. Plans will be available when you view the exhibit.

We would be pleased for a person to bring a load of wood to be dried. The wood should be split, not more than 22 inches long, four feet high and sixteen feet long. Give us a call if you are interested and in four to six weeks you should have a cord of wood in proper condition for burning.

This is a demonstration project that has been developed as a result of a grant from the Department of Energy to Virginia Tech.

If your hot water heater thermostat is set above 120°F it is too hot. Water above 130°F can scald. Make sure water temperature is under 120°F. This conserves energy and is a safety factor if small children are in the home.

MRS. GEORGE'S 4-H CLASS

Mrs. George's 4-H Class had a 4-H meeting. Our meeting began when our president, Jeff Agee, opened the meeting. Zane Torrence and Jeanne Pugh led us in the pledges. Next our recreation leadrs led us in a song called Uaba Duke of York and a game called Find the Leader. Our secretary read us the minutes from the last meeting. Mr. Sweet talked to us about Share-the-Fun and told us what it's about. Then our vice president turned the meeting over to Mr. Sweet and Mrs. Chilton. Mr. Sweet showed us slides on what we can do in 4-H this year. Then the meeting was turned over to Mrs. Sweet and Mrs. Chilton. Mrs
